Clean With Scooba

With the Clean tank filled and properly installed, place Scooba in the center of the room, press “Power” and then press “Clean.” Scooba will begin a cleaning cycle. Let Scooba clean until the tank is empty (approximately 45 minutes). Scooba’s “Clean” button will display the following:

<table>
<thead>
<tr>
<th>Clean Button Light</th>
<th>What it means</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Cleaning</td>
</tr>
<tr>
<td>Blue/Green pulse</td>
<td>Almost complete</td>
</tr>
<tr>
<td>Solid blue</td>
<td>Complete</td>
</tr>
</tbody>
</table>

Empty Scooba

When Scooba has completed a cleaning cycle, empty and rinse Scooba’s tanks.

1. Remove Scooba’s tank.
2. Open the Dirty and Clean tanks and drain.
3. Rinse the Dirty and Clean tanks with warm water.
4. Remove and rinse Scooba’s filter.
5. Remove and clean Scooba’s cleaning head and brush.
6. Replace Scooba’s tank.

Before You Get Started

**Scooba’s Cleaning Pattern**

Scooba is a robot that cleans differently than the way most people clean their floors. Scooba uses iRobot’s AWARE™ Robot Intelligence System to determine the best way to pass over and clean every section of the floor.

While Scooba is cleaning, it calculates the best path to clean your floor and it determines the best times to exhibit its various cleaning behaviors:

**Spiraling:** Enables Scooba to efficiently clean a concentrated dirty area

**Wall following:** Enables Scooba to clean the room perimeter and navigate around furniture and obstacles

**Room crossing:** Enables Scooba to clean new areas while crisscrossing the room

**IMPORTANT:** Let Scooba complete an entire cleaning cycle every time you clean

---

**Understand how iRobot Scooba cleans**

**Scooba’s Cleaning System**

Scooba performs 4 cleaning methods in one pass:

1. **Preps** – Picks up loose crumbs, sand, and dirt
2. **Washes** – Uses fresh, clean solution
3. **Scrubs** – Gently scrubs your floor, removing dirt, grime, and spills
4. **Dries** – Picks up the dirty solution, leaving the floor clean and dry*

---

**Internal Dry Mode**

At the end of the cleaning cycle, Scooba will enter a brief internal drying mode to remove any liquid remaining on its brushes and inside its cleaning mechanisms. During this time Scooba’s Clean light will blink blue.

---

**Fill Scooba’s Tank**

1. Open Scooba’s tank.
2. Lift the tank clear of the robot and place the tank on a flat surface.
3. Using the included measuring cup, measure and pour Clorox® Scooba cleaning solution into the Clean tank.
4. Slowly fill the remainder of the Clean tank with warm or cold tap water. Tilt the tank and ensure it is completely filled to the top.
5. Secure the tank cap and place the tank back in the tank holder.
6. Close the tank by pressing down on the tank. You will hear a click when the tank is properly installed.

---

**Charge Scooba’s Battery**

1. Release Scooba’s tank by pushing the handle.
2. Grasp the handle and pull Scooba’s tank up.

---

* Floor drying time may vary.

---

**Use of plain tap water or extremely small amounts of cleaning solution reduces Scooba’s ability to recognize water in the Clean tank. Always use the recommended amount of cleaning solution and water.**

Before You Get Started

Scooba’s Cleaning Pattern
Scooba is a robot that cleans differently than the way most people clean their floors. Scooba uses iRobot’s AWARE™ Robot Intelligence System to determine the best way to pass over and clean every section of the floor.

While Scooba is cleaning, it calculates the best path to clean your floor and it determines the best times to exhibit its various cleaning behaviors:

Spiraling: Enables Scooba to efficiently clean a concentrated dirty area

Wall following: Enables Scooba to clean the room perimeter and navigate around furniture and obstacles

Room crossing: Enables Scooba to clean new areas while crisscrossing the room

IMPORTANT: Let Scooba complete an entire cleaning cycle every time you clean

Understand how iRobot Scooba cleans

Scooba’s Cleaning System
Scooba performs 4 cleaning methods in one pass:

1. Preps – Picks up loose crumbs, sand, and dirt
2. Washes – Uses fresh, clean solution
3. Scrubs – Gently scrubs your floor, removing dirt, grime, and spills
4. Dries – Picks up the dirty solution, leaving the floor clean and dry*

* Floor drying time may vary.

Internal Dry Mode
At the end of the cleaning cycle, Scooba will enter a brief internal drying mode to remove any liquid remaining on its brushes and inside its cleaning mechanisms. During this time Scooba’s Clean light will blink blue.

Fill Scooba’s Tank

1. Open Scooba’s tank.
2. Lift the tank clear of the robot and place the tank on a flat surface.
3. Using the included measuring cup, measure and pour Clorox® Scooba cleaning solution into the Clean tank.
4. Slowly fill the remainder of the Clean tank with warm or cold tap water. Tilt the tank and ensure it is completely filled to the top.
5. Secure the tank cap and place the tank back in the tank holder.
6. Close the tank by pressing down on the tank. You will hear a click when the tank is properly installed.

Plunge the Power Supply into Scooba to charge the battery. For best performance, iRobot recommends charging Scooba’s battery overnight the first time only.

Use of plain tap water or extremely small amounts of cleaning solution reduces Scooba’s ability to recognize water in the Clean tank. Always use the recommended amount of cleaning solution and water.

Charge Scooba’s Battery

1. Release Scooba’s tank by pushing the handle.
2. Grasp the handle and pull Scooba’s tank up.
3. Place battery in Scooba by rotating the battery into its slot, making sure the yellow tabs fit inside the guide holes.
